| (6) Clip (at Type Holder) | (12) Temperature Controller | |

2) SAFETY PRECAUTIONS

- . Suggestions below are very important for the machine's safety use.
- . Place the machine on a stable platform or table to ensure that there is no movement of the machine during operation.
- . At all time neither TOXIC/INFLAMMABLE products should be placed near the machine nor any attempt should be made to print on any object or product containing TOXIC/INFLAMMABLE material.
- . Wherever possible when changing type sets, engravings, polymer engravings etc., some form of protective gloves should be worn. Avoid contacting the heated Type Holder with bare hand as this may cause burns.
- . Keep off your hand from Printing Table when the other hand pulls the Handle.
- . At no time should your Hot Printer 1000 remain accessible to children.
- . Plug in machine to the proper wall outlet, properly fused according to its electrical ratings.
- . Whenever necessary when changing the fuse or any electrical component, ensure the machine is turned off at the mains supply and plug is removed from power point.
- . Ensure that the Hot Printer 1000 is turned off after termination of operation and the power supply switch is also turned off.

3) HOW TO USE

- Lift up Foil Guide Bar (1) and push forward
- Release Type Holder (2) by pushing the Clips (3) forward
- Secure Type-Holder with the Type Holder Supporter (4)

(A) Type Setting

- . Feed in Lead Rules (1)
- . Center Lead Rules by turning the Knob (2)
- . Fill in Types (3) with the Nicks facing upwards
- . Fill Spacers (4) between words/letters and at the ends of each line
- . Separate lines by Lead Rules in case of need
- . Fill the rest of the space with Lead Rules
- . Use Allen Key (5) to hold shorter lines (6) and to tighten vertically (7)
- . Return Type Holder to its original position

CAUTIONS

- . Ensure the feet of all the Types are in good contact with Type Holder
- . Adding Spacers to one line may loosen another, so be careful; and remember to keep thin Spacers away from end slugs

Note: If still have any difficulty, please refer to = Type Setting - Instruction for Beginner =

(B) Foil Feeding

- . Take out Foil Holder (1) by releasing Nuts (2) at both ends
- . Insert Foil
- . Return Foil Holder to its position
- . Lower Foil Guide Bar

- . Remove the Black Rubber Cap (3)
- . Turn aside the Metallic Clip (4) to release Metallic Roller (5)
- . Slip foil under Foil Guide Bar and between rollers with the aid of a ruler
- . Return the Metallic Clip to hold foil firmly

CAUTIONS

- . Ensure the emulsive side of foil is facing outward .
- . Ensure that foil is positioned to cover the width of Engraving and/or Types
- . Consult your suppliers for the foil most suitable for the article to be printed

(a) Foil Guide Bar

Serves three purposes:

- . To keep foil away from Type Holder so that while not in actual use the foil is not affected by heat emitted from Type Holder
- . To maintain a constant tension of foil
- . As a safety device to prevent the hands from contacting the heated part

(b) Foil Adjustment Arm

Position A (2)
(3)
Position B
(1)
(4)

- . Controls the amount of foil used, the shorter the Foil Adjustment Arm (1) the smaller amount of foil is fed
- . Loose the Allen Screws (2) & (3) then adjust the length of Foil Adjustment Arm

Note: Shift the Allen Screw (2) from Position A to B (or vice versa), if necessary

CAUTION

- . Taking care not to damage the Spring (4)

(C) Temperature

- . Temperature is controlled by Thermostat
- . Turn Control Switch (1) to the appropriate scale according to the following table

Scale	1	2	3	4	5	6	7	8	9	10
Temp. (°C) (Approx.)	110	120	130	140	150	160	170	180	190	200
Temp. apply on various material for reference only	leather/ P.V.C.		Paper/ cards			acrylic/ plastic		wood		

- . Turn on the Switch (2). (The red (3) and green (4) LEDs are then on)

- . When the green LED is off, temperature is at the required constant. (as a temperature regulation indicator, the green LED will be on and off during operation)

- . Blocking Temperatures

The temperature range is approximately 110°C - 160°C for most materials. It is not possible to recommend a given temperature for any particular surface to be blocked because of the various production conditions that are encountered. The affecting factors would be as follows:

- . Foil
- . Surface to be blocked - coarse/smooth
- . Pressure
- . Printing Area
- . Dwell(time in contact)
- . Type of die to be used
- . Ambient condition

Note: The optimum temperature for a certain material can be found though test prints at different temperature. Too much heat is not recommended except for hard plastics

(D) Test Print

- Stick a piece of paper on Printing Table (1)
- Pull Handle (2) to print on the paper
- Check for errors in spelling, punctuation etc.
- Release the Fixing Knob (3) and shift Guide Rule (4) to fix the position for the articles to be printed

(a) Causes of Imperfect
Printed Results &
Corrections

<u>Causes</u>	<u>Corrections</u>
. Different height of Types	. Stick a piece of paper of adhesive tape to the feet of short Types . Stick a piece of adhesive tape (5) over the unclear part of the test print (6)
. Printing Table Pad uneven and/or damaged	. Replace <u>Printing Table Pad</u>
. Printing Table unlevelled	. Adjust the four (4) screws underneath Printing Table (Please refer to = Printing Table =)

Note: Inadequate temperature, pressure, foil or greasy dirt over the contacting surfaces also accounts for imperfect printed results

(E) Stamping Pressure

- Turn & lower the Pressure Control Nuts (1) to give 'stable pressure when fragile articles are to be printed

Note: Apply higher pressure for coarse surface

- After the previous steps are finished, you can commence the printing job. Bear in mind that perfect results are achieved from the experience obtained through test prints

4) HOW TO PRINT WITH ENGRAVING

- . Stick Engraving (1)
onto Heat Transmission
Block (2) by use of
Double Side Tape (3)
- . Please refer to = How
To Use = for other
procedures

CAUTIONS

- . Stick adhesive tape
evenly
- . Tighten the Heat
Transmission Block
by turning the Knob
(4) at Type Holder

Note:

- . Engraving can be
removed with cleaning
spirit or peeled off
with a knife
- . Be careful, DO NOT
bend the engraving
or cause damage to
its surface

5) GUIDE RULE FOR ENGRAVING

- . Recommended to be used in printing business cards, envelopes, invitation cards, especially when engraving is used
- . Choose the desired position
- . Fix Guide Rule (1) with the Knob (2) and Nuts

6) PRINTING TABLE

- Printing Table (1) is designed to slide along the rails (2) and to fix at any position. Release the Hexagon Screws (3) as shown in the diagram and Printing Table can be fixed

(A) Levelling of Printing Table

- Remove the Pin (4) and slide our Printing Table
- Turn Printing Table upside down

- . Loose the Large Allen Screws (5), and adjust the Smaller Allen Screws (6) to achieve required level
- . Tighten the Large Allen Screws
- . Return Printing Table

7) HOW TO PRINT ARTICLES HIGHER THAN 2 CM

- . Remove Printing Table, and the printing jobs can be done on the article placed below Type Holder

8) HOW TO CHANGE EXTENDED
PRINTING TABLE

- . Use Extended Printing Table to hold articles upto A4 size
- . Remove the Screws and replace Chrome Frame by Extended Printing Table

9) HOW TO PRINT ON PEN & PENCIL

- . Slide out Printing Table
- . Replace the upper part of Printing Table by Pen & Pencil Holder (1)
- . Adjust the Hexagon Screws (2) (adjacent to the end of the rails) for a precise printing position

Note:

- . It is advisable that Pen & Pencil Holder be stayed in a fixed position
- . Please refer to = Printing Table = to slide out the Printing Table

10) HOW TO PRINT ON BOOK
MATCHES

- . Insert the matches underneath the table
- . Prostrate the flap of Book Matches (1) on Printing Table (2)

CAUTIONS

- . Keep the matches away from the heated part

11) THE USE OF REMOVABLE
TYPE HOLDER

- . To accommodate and preserve set up of Types
- . Follow the procedure of = Type Setting = to set Types

CAUTIONS

- . Tighten the Types before fitting the Holder to the machine
- . Hold the Lines with Side Screws (1) of Type Holder on the machine

- 12) HOW TO PRINT
(i) ON EMBOSSED PORTIONS
(ii) WITH MULTI-COLOURED
HEAT TRANSFER LABELS

- . Stick Silicone Rubber (1) onto Heat Transmission Block by using double side tape
- . Please refer to = How To Use = for other procedures

- 13) HOW TO EMBOSS ON LEATHER/
PVC ETC.

- . Embossing can be obtained on leather, and PVC by direct stamping (without foil) at higher temperature and pressure

14) LUBRICATION

- Prior to usage ensure that machine is properly lubricated (use normal machine oil) see diagram for location of oil inlet

Oil points

15) CLEANING

- Using spirit/cleaning agents to clean Foil Rollers, Heat Transmission Block, Type face, Engraving and Type Holder

16) SPECIFICATIONS

- . Power Supply:
AC 110V/120V or
220V/240V
- . Power Consumption:
400W
- . Cycle: 50 - 60 HZ
- . Overall Dimensions
(Approximately):
260mm (W) x
350mm (D) x
390mm (H)
- . Weight: Approx.
22 kgs.
- . Printing Area:
Maximum 150mm x 80mm
- . Size of Printing Table:
235mm x 120mm
- . Clearance between the
Type and the Table:
Approx. 55 mm
- . Speed 1,000 Stampings/hour
- . Colour: White

17) FEATURES

- . Thermostatic control
- . Solidly built
- . Compact in size and
portable
- . Easy operation
- . No messy inks, no
odors, no drying time
- . Print any colour in
addition to gold and
silver
- . Automatic foil pulling
system
- . Multi purposes Printing
Table
- . Special designed Holder
for Types and engravings

18) TYPE SETTING - INSTRUCTION
FOR BEGINNER

These instructions are intended to aid anyone who is just a beginner when it comes to set Types. There is no special way that is the best. We recommend a very good way for those who have had little or no experience. As one gains experience in setting Types, different ways of shortening the process will become apparent

Check the Copy

Before any type setting is begun, the required lines of lettering or copy should be carefully checked for errors in spelling, omission, punctuation etc. Any doubtful wording should be verified. Making corrections at this stage will be easier than after Types have been set

. Type Holder

- . In order to achieve a printed impression from Types, individual letters must be set by hand into the words that are required to be printed. The normal way of setting Types are to place each piece of Types into a Chase that holds the Types together. The Chase is also referred to as a Type Holder

Type Holder on the Hot Printer 1000 drops and clips in position to facilitate Type setting. Also the Jaws of Type Holder can be opened and closed to accommodate Removable Type Holder.

- . Place 1,2 or more Lead Rules in the Type Holder depending on the size of the printing area you require to print
- . The Types are set line by line in the same sequence as shown in the copy. This means you start with the first word in the first line and end with the last word of the last line
- . If you examine a piece of Type, you will see a deep notch on one of the long sides. This is called the Nick. (Most Types have only one Nick, but some Types have two Nicks)
- . When setting Types into the Type Holder, the Nick should face UP and be visible, thus making the letters appear upside down

- . Although it is the Types itself that actually makes the printed impression, the spaces at the ends of each line and those between words and/or letters must be filled up with Spacers that do not actually show up as print
- . The Spacers that fit between words come in different width that vary from a very thin space up to 1/6" or more
- . 12 point Spacers should be used with 12 point Types, 14 point Spacers with 14 point Types etc. When purchasing Types, purchase the Spacers to suit the Type sets you are using
- . Lead Rules are strips of metal that are used to increase the space between lines. It will also prevent the next line from mixing with previously set Types. These vary in thickness and are cut to various lengths
- . After all the Types are set in position, use more Lead Rules to fill the remaining space of the Type Holder
- . Turn the Knob which is located on the right hand side of Type Holder to center all the Lead Rules, and to lock the Types in position
- . Inspect the Types for Tightness
 - . Use Tweezers to check each line for tightness. If a line is loose, insert additional thin Spacers as required.
 - . Continue checking until all lines are tightly held

19) OPTIONAL ACCESSORIES

(A) Type Sets (For General Printing)

- Lettering that is used in letterpress printing or hot stamping/ foil blocking is called Types. Capital letters are called Caps and small letters are called Lower Case
- A set of Types contains more than just the alphabet. Punctuation marks; figures or numerals, miscellaneous signs etc. are also included. All these combine to a Fount of Type

FOUNT OF TYPE (Number of type or letters in a set)

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z	&
10A 10a	10	4	7	6	15	5	5	6	15	4	4	7	6	10	15	6	3	10	10	10	8	4	4	3	4	3	3
5A 5a	5	2	4	3	8	3	3	3	6	2	2	4	3	5	6	3	2	5	5	5	4	2	2	2	2	2	1
3A 3a	3	2	2	2	5	2	2	2	3	2	2	2	2	3	3	2	1	3	3	3	2	2	2	1	2	1	1
	1	2	3	4	5	6	7	8	9	0	.	,	'	;	:	-	()									
10A 10a	10	8	8	8	8	8	8	8	8	15	5	5	2	2	2	4	2	2									
5A 5a	4	3	3	3	3	3	3	3	3	5	2	2	1	1	1	2	1	1									
3A 3a	3	2	2	2	2	2	2	2	2	3	1	1	1	1	1	1	1	1									

Remarks: (A) = Capital letter
 (a) = Lower case letter
 Additional Types in French, Scandinavian, Arabic, Greek, Spanish, Italian, German, Japanese etc. are also available

- . Spacers - blank Types
used to create
space between
words
- . Lead Rules - metal strips
that are used
to creat the
space between
lines of type
- . Removable Type Holder -
to accommodate
and preserve
set-up of Types
- . Wooden Type Tray with cover -
recommended with
each Type set to
keep your Types
assorted
- . Tweezer - for handling
individual letter
- . Engravings - Stick onto
provided Heat
Transmission
Block to print
logo
- . Guide Rule for Engraving
- . Entended Printing Table -
to hold articles
upto A4 size
- . Pen & Pencil Holder -
for holding pen and
/or pencil to be
stamped
- . Printing Table Pad -
as a cuison for
articles to be
printed
